

=====

Report on unusual sequences in BJT Pali text

=====

This report is done upon the BJT Pali text (downloaded on Mar 29, 2025) converted to Roman. The target cases are about odd sequences, 350 or so totally found (only a small number of them are not errors). Detecting commands used are also given, for the findings can be replicated. The order of the files comes directly from the commands used (grep or gawk). It can be unexpected, but understandable.

Sinhala script transliteration of the errors and corrections is facilitated by Pāli Platform 3. This can help locating errors more easily. The program is also heavily used in cross-checking with other corpora (CSTR or CST4). It is designed for this kind of workflow.

Note that not all of these instances are erroneous, please handle them with care. In dubious cases, some notes are also given. That can be a little helpful, but you have to examine further and do the judgments cautiously.

Report format (of each instance) explained:

(No.) error => correction (or notes otherwise)
[Sinhala script transliteration] (in case of textual correction)
filename.json:"text": full text of the line

Note:

It is "[missing pali]" that makes 'g '. This is a case of English contamination. To make it Pali, [naṭṭhā pāli] is a possible alternative. Or use another redacting tool like ... (can be mistook as ellipsis), or use another non-word symbol (you may find --- more usable as we have seen in other parts), or keep it as such (up to you).
